

# Lung cancer screening can save your life

Getting screened can lower your risk of dying from lung cancer by at least 25%.

Ask your primary care provider if you are eligible.

You are 50 to 74 years old

You currently smoke cigarettes

or

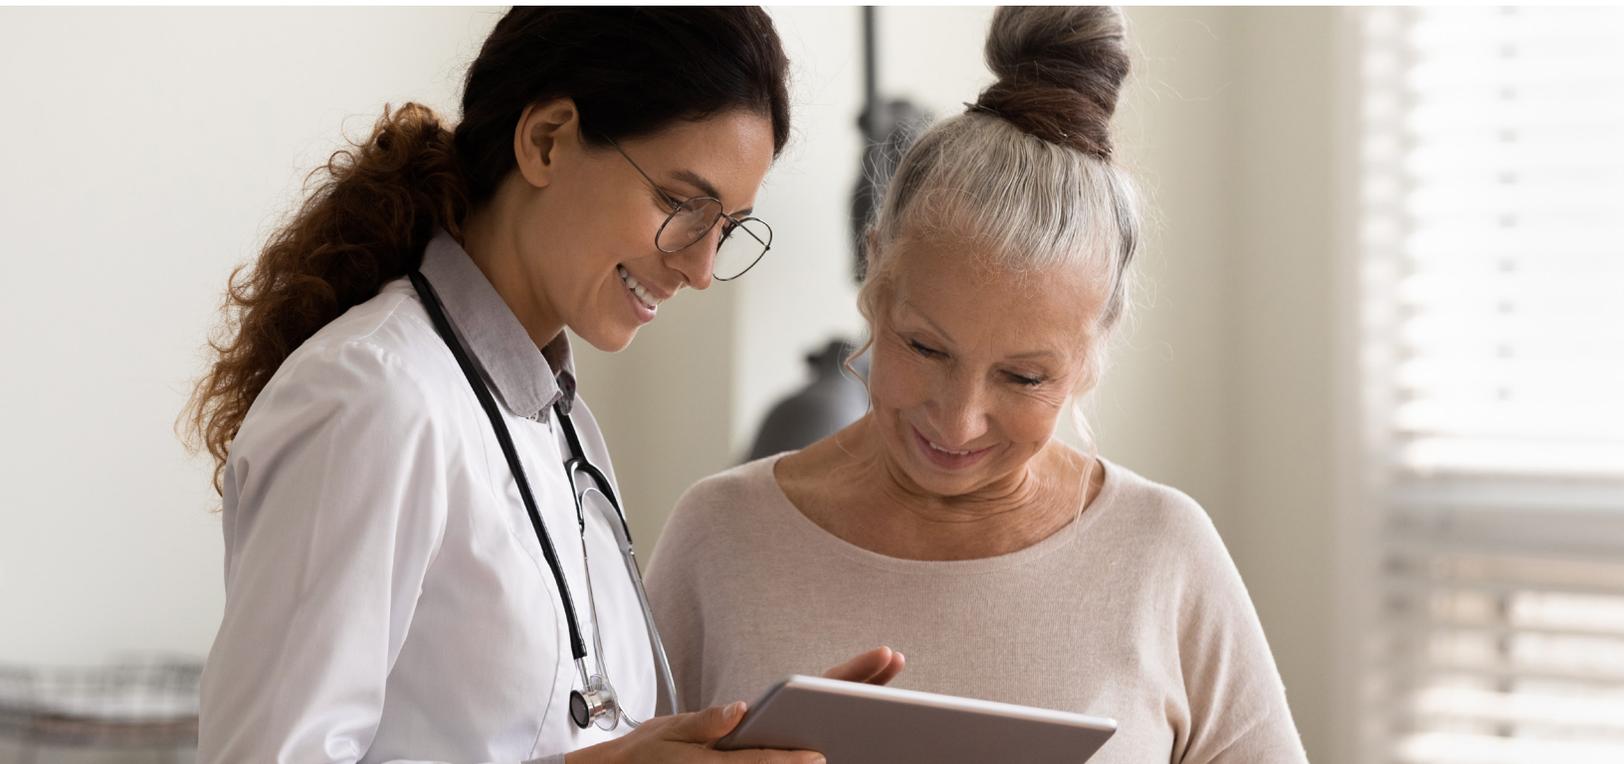

You previously smoked cigarettes

Screening works by finding cancer early, before you have symptoms, when it is easier to treat or cure. Visit [screeningforlife.ca/lung](https://screeningforlife.ca/lung) or scan the QR code for more information about lung cancer screening.
